

This festive gourd is a miracle food for dogs. Good for both diarrhea and constipation, canned pumpkin (not raw, not the sugary, spicy pie filling) is loaded with fiber and beta-carotene, which the body converts to vitamin A. Don't give Buddy a lot of it—too much vitamin A is highly toxic to dogs—but a couple of teaspoons a day for little pups, or a couple of tablespoons for big boys, should keep them right on track.

PUMPKIN IS NUTRIENT-RICH

PUMPKIN BENEFITS EYES

PUMPKINS BOOST IMMUNE HEALTH

PUMPKINS MOISTURIZE SKIN & COAT

PUMPKIN SEEDS PREVENT URINARY INCONTINENCE

PUMPKINS ENCOURAGE DIGESTIVE REGULARITY

PUMPKINS AID IN WEIGHT LOSS

PUMPKIN HYDRATES

HOW MUCH PUMPKIN DO I FEED MY DOG?

While pumpkin can be a fantastic addition to your dog's complete diet, it's important that you feed the correct amounts. It's unlikely that your dog will overdose on any natural nutrient by consuming too much pumpkin, but if your dog eats too much pumpkin, it could lead to a nutritional deficiency somewhere else, or could mean your dog is getting too few calories.

Generally, 1 tsp of canned (or cooked and pureed) pumpkin per 10lbs of body weight per day is a good standard to go by. If your dog has a health condition such as diabetes, please talk to your vet before feeding pumpkin to your dog. As a general rule, treats (including fruits and vegetables) should never exceed 10% of your pet's daily caloric needs.

Pumpkin seeds are high in fat and should be fed more sparingly. 1 ground up pumpkin seed per 10lbs of body weight per day is a safe amount.

For puppies and very small or underweight dogs, only feed pumpkin in very small amounts as a treat.

1 CUP COOKED PUMPKIN		VITAMIN A 14100 IU	CALORIES 49kcal	SUGARS 5.1g	POTASSIUM 564mg	FIBRE 2.7g
